

Seminar at Doshisha University

International Production and Distribution Networks in East Asia

Fukunari Kimura
Professor, Keio University
(fkimura@econ.keio.ac.jp)

2008.01.16.

F.K.

1

1. Introduction

- The nature and characteristics of international prod./dist. networks must be analyzed more carefully.
- Mainly (but not limited to) machinery industries.
- International prod./dist. networks in East Asia are distinctive in (i) their significance, (ii) their extensiveness, and (iii) their sophistication.
- Comparison with the US-Mexico nexus and the WE-CEE corridor would be useful.

2008.01.16.

F.K.

2

2. "18 facts" on prod./dist. networks in East Asia

- "18 Facts"
 - Facts 1-8: from international trade statistics
 - Process-wise international division of labor among countries at different development stages
 - Facts 9-11: from microdata of Jap. MNEs
 - Prod./dist. networks; intra-firm vs. arm's length
 - Facts 12-18: from case studies/casual obs.
 - Location advantages; agglomeration; service link cost; outsourcing (disintegration); local firms

2008.01.16.

F.K.

3

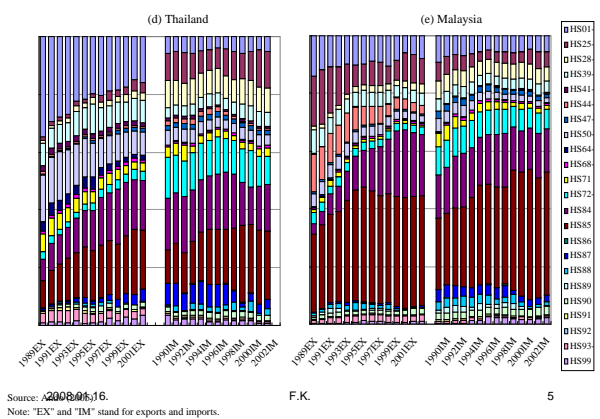

- Facts drawn from international trade statistics
 - **Fact 1:** *International trade pattern of the East Asian countries has rapidly shifted from one-way trade to intra-industry trade since the beginning of the 1990s.*
 - Ando (2005).
 - **Fact 2:** *Most of the intra-industry trade of the East Asian countries is "vertical" rather than "horizontal."*
 - Fukao, Ishido, and Ito (2003), Ando (2005).
 - **Fact 3:** *Vertical intra-industry trade of the East Asian countries does not necessarily follow the pattern suggested by vertical product differentiation models.*
 - Ando (2005).

2008.01.16.

5

Figure 2 5 Rapid expansion of vertical IIT in machinery goods and machinery parts and components for East Asia's trade

2008.01.16.

F.K.

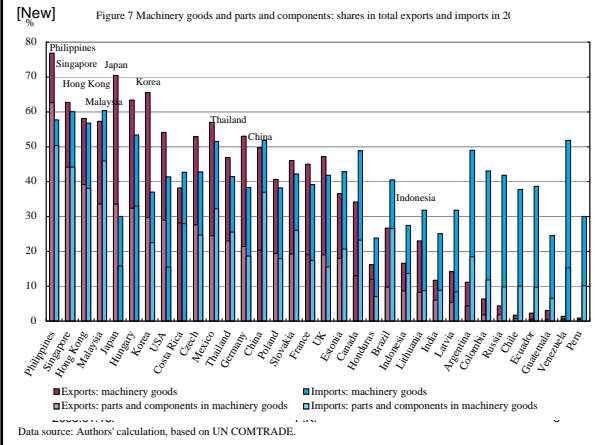

6

- **Fact 4:** Shares of machinery and machinery parts & components in both total exports and imports have become notably large in East Asian countries.
 - Ando and Kimura (2005b).
- **Fact 5:** Explosive increases in intra-East-Asia trade, particularly in machinery parts & components, have been observed since the 1990s.
 - Ando and Kimura (2005b).
- **Fact 6:** Active back-and-forth transactions of machinery parts & components are observed among countries with different income levels.
 - cf. core EU
 - cf. WE-CEE in Ando and Kimura (2005c).

Table 2 Development of intra-regional exports in East Asia (excerpt)

| | 1990 | | 2003 | |
|--|-----------|--------|-----------|--------|
| | Value | Share | Value | Share |
| Machinery goods: parts and components | | | | |
| Intra-East Asia | 54,336 | 39.6 | 300,137 | 57.5 |
| Others | 82,915 | 60.4 | 221,637 | 42.5 |
| (U.S.) | (39,624) | (28.9) | (82,543) | (15.8) |
| Total | 137,251 | 100.0 | 521,774 | 100.0 |
| Machinery goods: final goods | | | | |
| Intra-East Asia | 50,932 | 23.3 | 144,368 | 28.8 |
| Others | 168,597 | 76.8 | 356,732 | 71.2 |
| (U.S.) | (70,183) | (32.0) | (143,634) | (28.7) |
| Total | 219,529 | 100.0 | 501,100 | 100.0 |
| Machinery goods: total | | | | |
| Intra-East Asia | 105,268 | 29.5 | 444,505 | 43.5 |
| Others | 251,512 | 70.5 | 578,369 | 56.5 |
| (U.S.) | (109,807) | (30.8) | (226,177) | (22.1) |
| Total | 356,780 | 100.0 | 1,022,875 | 100.0 |
| All products | | | | |
| Intra-East Asia | 270,465 | 38.5 | 786,197 | 44.7 |
| Others | 432,736 | 61.5 | 973,074 | 55.3 |
| (U.S.) | (174,978) | (24.9) | (355,643) | (20.2) |
| Total | 703,201 | 100.0 | 1,759,271 | 100.0 |

Data source: Authors' calculation, based on UN COMTRADE. F.K. Drawn from Ando and Kimura (2005b).

Factors of growth in intra-East Asian exports

| (i) Growth in intra-East Asian exports (1990-2003) | |
|---|------|
| All products | 191% |
| Machinery goods (total) | 322% |
| - Machinery final goods | 183% |
| - Machinery parts and components | 452% |
| (ii) Contribution to growth in intra-East Asian exports | |
| Machinery goods (total) | 66% |
| - Machinery final goods | 18% |
| - Machinery parts and components | 48% |

Factors of growth in inter-regional exports

| (i) Growth in inter-regional exports (1990-2003) | |
|---|------|
| All products | 125% |
| Machinery goods (total) | 130% |
| - Machinery final goods | 112% |
| - Machinery parts and components | 167% |
| (ii) Contribution to growth in inter-regional exports | |
| Machinery goods (total) | 60% |
| - Machinery final goods | 35% |
| - Machinery parts and components | 26% |

Factors of growth in East Asian exports

| (i) Growth in East Asian exports (1990-2003) | |
|---|--------|
| All products | 150% |
| Machinery goods (total) | 187% |
| - Machinery final goods | 128% |
| - Machinery parts and components | 280% |
| (ii) Contribution to growth in East Asian exports | |
| Machinery goods (total) | 63% |
| - Machinery final goods | 27% |
| - Machinery parts and components | 10 36% |

- **Fact 7:** In the standard gravity equation estimation for machinery parts & components trade, notably low coefficients in absolute values for geographical distance are estimated in the case of intra-East-Asia trade, compared with intra-Europe trade.
 - Kimura, Takahashi, and Hayakawa (2005).
- **Fact 8:** In the gravity equation exercise with a modified version, positive coefficients are estimated for income gap between exporting and importing countries in the case of intra-East-Asia trade.
 - Kimura, Takahashi, and Hayakawa (2005).

2008.01.16.

| 2008.01.16. | F.K. | | 13 |

- Facts drawn from micro data of Jap. MNEs
 - **Fact 9:** FDI in East Asia by Japanese firms has concentrated on manufacturing. In addition, small and medium enterprises (SMEs) have also been major players of FDI in East Asia.
 - Kimura and Ando (2005).
 - **Fact 10:** Affiliates of Japanese firms in East Asia have actively traded with countries in East Asia other than Japan.
 - Cf. AJF in LA and CEE (Ando and Kimura (2005b, 2005c)).
 - **Fact 11:** Intra-firm transactions are relatively large in sales to and purchases from Japan while arm's-length (inter-firm) transactions are relatively large in local sales and purchases.
 - Ando and Kimura (2005b).
- 2008.01.16. F.K. 14

Data source: authors' calculation, based on MFI database.

- Facts drawn from case studies and casual observations
 - **Fact 12:** Many other elements of location advantages than low wages seem to be increasingly important in direct investment decisions in East Asia.
 - e.g., WB investment climate study, JETRO, JBIC, JBCTIF.
 - **Fact 13:** We have observed explosive proliferation of industrial estates in East Asia where substantial investment facilitation and basic infrastructure services are realized.
 - e.g., intimate services, customs clearance, rental factory/floor.
 - **Fact 14:** Agglomeration has begun to be formulated in East Asia, as a mixture of MNEs and local firms.
 - e.g. Shanghai-Jiangsu, Guangzhou, Samut Prakan, Eastern Seaboard, Penang, Shah Alam.
- 2008.01.16. F.K. 17

- **Fact 15:** "Service link cost" for connecting remotely located production blocks seems to be lowered, or at least stable with quantitative increase, over time in East Asia.
 - e.g. duty-drawback, AFTA, 40-foot containers, air cargo, customs clearance.
 - **Fact 16:** We have recently observed notable dissemination of ideas related to efficient production/distribution networks such as just-in-time (JIT) production system, supply chain management (SCM) or value chain management (VCM), lead time, vendor managed inventory (VMI), milk run, and others in East Asia.
 - e.g., Toyota production system, Dell model.
- 2008.01.16. F.K. 18

– **Fact 17:** *Disintegration or detachment of activities beyond the boundary of firm has increasingly been observed in East Asia.*

- e.g. OEM, EMS firms, internet auction.
- Modular versus total integration, fixed cost versus proximity.

– **Fact 18:** *Particularly in China, Malaysia, and Thailand, we have recently observed notable penetration of local firms into production networks.*

- e.g., Automobiles and ink-jet printers in Thailand.

2008.01.16.

F.K.

19

[New]

• Spatial structure of production networks (in the case of machinery industries)

- 1st layer (local): lead time < 2.5 hours mainly by trucks
 - Arm's length, tight JIT, high frequency
- 2nd layer (sub-regional): lead time = 1-7 days by sea, air, and others
 - Arm's length + intra-firm, modular, between agglomeration/hubs
- 3rd layer (regional): lead time = 1-2 weeks mainly by sea
 - Mainly intra-firm, Japan-ASEAN, Bangkok-Hanoi, ...
- 4th layer (world): lead time = 2 weeks - 2 months mainly by sea (containers)

2008.01.16.

F.K.

20

3. Mechanics of two-dimensional fragmentation and agglomeration

- Seminal work: Jones and Kierzkowski (1990)
- Adding “disintegration” to “geographical distance” as another dimension of fragmentation (particularly important in East Asia)
 - cf. vertical integration, Antras and Helpman (2004), ...
- Reduction in production cost per se vs. service link cost in two dimensions
- Link with agglomeration at the industry/macro level
 - Location advantages (including policy environment); economies of scale in service link
 - Proximity to facilitate arm's-length transactions

2008.01.16.

F.K.

21

Before fragmentation

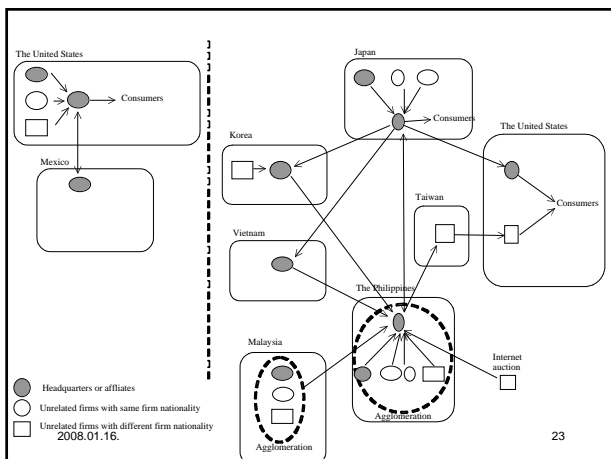

After fragmentation

2008.01.16.

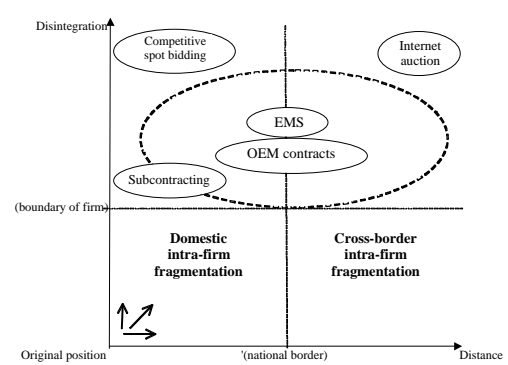

F.K.

22

23

Figure 5 Fragmentation in a two-dimensional space

Soete, Kijima and Ando (2005).

F.K.

24

4. Policy environment for int'l prod./dist. networks

- Policy background for network development
 - Policy reform of East Asian countries in the late 1980s and early 1990s.
- Policy agenda for developing EA
 - Clean up inefficient import-substituting industries
 - Further activate prod./dist. networks

2008.01.16.

F.K.

25

[New]

Table 8 Two-dimensional fragmentation and improvement in investment climate

| | Reduction in fixed costs to develop production/distribution networks | Reduction in service link costs connecting production blocks | Further cost reduction in production cost per se in production blocks |
|---|---|--|---|
| Fragmentation along the distance axis | Various policies to reduce investment costs Examples : (i) improvement in stability, transparency, and predictability of investment related policies, (ii) investment facilitation in FDI-hosting agencies and industrial estates, (iii) liberalization and development in financial services related to capital investment | Various policies to overcome geographical distance and border effects Examples : (i) reduction/removal of trade barriers such as tariffs, (ii) trade facilitation including simplification and improved efficiency in custom clearance/procedures, (iii) development of transport infrastructure and improved efficiency in transport and distribution services, (iv) development of telecommunication infrastructure, (v) improved efficiency in financial services related to operation and capital movements, (vi) reduction in costs of coordination between remote places by facilitation of the movement of natural persons | Various policies to strengthen location advantages Examples : (i) establishment of educational/occupational institutions for personnel training to secure various types of human resources, (ii) establishment of stable and elastic labor-related laws and institutions, (iii) establishment of efficient international and domestic financial services, (iv) reduction in costs of infrastructure services such as electricity and other energy, industrial estates services, (v) development of agglomeration to facilitate vertical production chains, (vi) establishment of economic institutions such as investment rule and intellectual property rights, (vii) various trade and investment facilitation |
| Fragmentation along the disintegration axis | Establishment of economic environment to reduce set-up costs of firm's length transactions Examples : (i) establishment of economic system to allow co-existence of various business partners as well as making various types of contracts, (ii) various policies to reduce costs of information gathering on potential business partners, (iii) securing fairness, stability, and efficiency in contracts, (iv) establishment of stable and effective institutions to secure intellectual property rights | Development of institutional environment to reduce the cost of implementing firm's length transactions Examples : (i) policies to reduce monitoring cost of business partners, (ii) improvement in legal system and economic institutions to activate dispute settlement mechanism, (iii) policies to promote technical innovations in modulation to further facilitate outsourcing | Various policies to strengthen competitiveness of potential business partners Examples : (i) hosting and fostering various types of business partners including foreign and indigenous firms, (ii) strengthening supporting industries, (iii) various policies to promote the formation of agglomeration |
| | 2008.01.16. | F.K. | 26 |

- Possible uneven developments in EA
 - Link with new economic geography
 - Mobility of human capital and technology
 - Economies of scale in service link
 - Economies of scale in agglomeration
 - Possibly generate winners and losers
 - Also, congestion effect => possibly trickle down to latecomers; policy matters
- Issues for developed countries
 - "Hollowing-out"; employment and productivity
 - Cf. micro data analysis of Japanese firms: firms extending operation in EA seem to generate domestic employment at the firm level (Ando and Kimura (new)).
 - Cf. US, EU

2008.01.16.

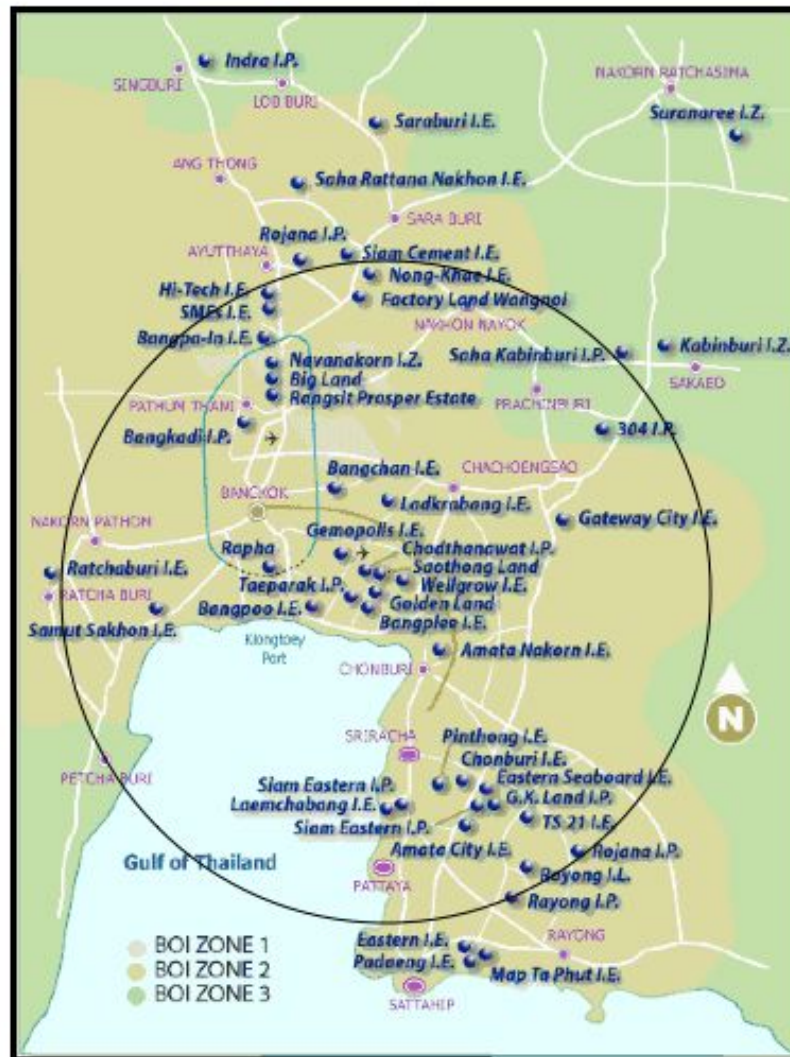

F.K.

27

[Map1]

[New]

The large portion of the industrial estates in Thailand are within 100km diameter circle, which is within 2.5 hours by trucks. Tight JIT system is operated. About the same size as Pearl River Delta, extended Tokyo, extended Nagoya area, and others.

[Map2]

[New]

The distance between Bangkok and Singapore is about 1,500km; the lead time is 1-7 days.

Both arm's length and intra-firm trade exist.

Active trade in modules and large lots of parts.

[Map3]

[New]

1,500km are also the distance within which agglomerations/hubs are connected.
